PROFESSIONAL SUMMARY

Frontend Engineer with 3+ years of hands-on experience delivering high-performance, accessible React.js applications for enterprise and B2B/B2C platforms. Spearheaded a CRA-to-Vite migration reducing build times by ~40%, architected shared component libraries adopted across 4+ product modules, and optimized state management (Redux, Zustand, React Query) to cut unnecessary re-renders by 30%+. Proven ability to collaborate cross-functionally with backend engineers, UX designers, and product managers in Agile/Scrum environments to ship production-grade features on schedule. Passionate about web performance (Core Web Vitals), accessibility (WCAG 2.1), and scalable frontend architecture.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, HTML5, CSS3, SQL

Frameworks & Libraries: React.js (v17/v18), Next.js, Redux, Redux-Saga, Redux Toolkit, React Router v6, Material UI, Tailwind CSS

Architecture & Patterns: Component-driven development, micro-frontend concepts, design systems, Storybook, responsive design, cross-browser compatibility

State & Data Management: Redux Toolkit, Zustand, React Query (TanStack Query), Context API, REST API integration, JSON, normalized state patterns

Build & DevOps Tooling: Vite, Webpack, Nx (familiar), NPM/Yarn, Git, GitHub, GitHub Actions (CI/CD), Vercel

Testing & Quality: Jest, React Testing Library, unit testing, integration testing, web performance optimization, Core Web Vitals, Lighthouse

Design & Collaboration: Figma (design handoff), Agile/Scrum, JIRA, code reviews, pair programming, cross-functional team collaboration

Accessibility: WCAG 2.1 AA compliance, semantic HTML, ARIA attributes, keyboard navigation, screen reader testing

PROFESSIONAL EXPERIENCE

Capgemini — Consultant — Frontend / UI Engineer

Aug 2025 – Present

Global IT consultancy (200,000+ employees) serving Fortune 500 enterprise clients across BFSI, healthcare, and retail.

- Architected and maintained 10+ reusable React.js UI components (modals, data tables, form controls) adopted across 4 enterprise modules, reducing cross-team UI development effort by ~25% and ensuring visual consistency.
- Delivered 5+ end-to-end features in collaboration with backend engineers, UX designers (Figma handoffs), and platform teams — all meeting WCAG 2.1 AA accessibility standards and responsive across mobile/tablet/desktop.
- Established shared component library documentation and architectural guidelines using Storybook, cutting UI-related defect tickets by ~20% quarter-over-quarter and accelerating onboarding for new developers.
- Authored 50+ unit and integration tests using Jest and React Testing Library, improving regression coverage to 85%+ on core user flows and reducing production bugs by ~15%.
- Led code reviews for 3 junior developers, enforcing TypeScript best practices, accessibility standards, and performance patterns (memoization, lazy loading, code splitting).
- Participated in Agile/Scrum ceremonies (sprint planning, daily standups, retrospectives) using JIRA, consistently delivering features within estimated story points.

Gloify — Frontend Developer

Jan 2023 – Aug 2025

Product development studio building custom B2B/B2C web and mobile applications for startups and mid-size businesses.

- Engineered 15+ modular React.js components powering authentication flows, role-based routing, and dashboard features using Redux-Saga for complex async state management.

- Spearheaded CRA-to-Vite migration across 2 production applications, reducing build time by ~40% (120s → 72s) and dev server cold start from ~15s to ~4s, significantly improving developer productivity.
- Optimized frontend performance by implementing normalized Redux state architecture and memoized selectors (reselect), reducing unnecessary re-renders by ~30% on data-heavy pages with 500+ list items.
- Integrated 20+ RESTful API endpoints with robust error handling, loading states, and retry logic, collaborating closely with backend engineers to define API contracts and optimize response payloads.
- Designed and shipped a shared component library of 15+ UI primitives (forms, modals, data tables, toast notifications) used across 3 product lines, reducing feature development time by ~35%.
- Improved Core Web Vitals scores (LCP, FID, CLS) through image lazy loading, code splitting with React.lazy/Suspense, and bundle analysis with Webpack Bundle Analyzer.
- Mentored 2 junior developers through pair programming sessions, code reviews, and knowledge-sharing on React patterns (custom hooks, compound components, render props).

KEY PROJECTS

Learning Application (Duolingo-style) *[Client Project — EdTech Platform]*

- Designed and developed a lesson-based learning platform using React.js and Material UI, supporting 5+ learning modules with structured progression, adaptive difficulty, and session persistence.
- Built centralized Redux state management for user progress tracking, enabling real-time completion metrics and cross-device state sync.
- Created a reusable component library (lesson cards, progress indicators, result screens) reducing development time for new modules by ~50%.
- Ensured WCAG 2.1 AA accessibility compliance and mobile-first responsive design across all breakpoints.

Smart Secure Browser *[Client Project — Anti-Cheating Assessment Tool]*

- Engineered a controlled browser environment using React.js, Electron, and Python (backend services) for secure online assessments, blocking tab switching, external navigation, clipboard access, and 10+ unauthorized user actions.
- Built Python-based backend monitoring services for logging assessment activity, flagging suspicious behavior patterns, and generating proctoring reports for administrators.
- Designed a configurable rule engine allowing administrators to customize restriction policies per assessment type without code changes — supporting 3 different exam formats.
- Implemented custom event listeners (focus, blur, visibilitychange, keydown) and DOM mutation observers for real-time cheat detection.

ITER — Service Booking Platform *[Client Project — B2B & B2C Marketplace]*

- Developed a full-featured service booking platform handling B2B and B2C workflows, user role management, and booking lifecycle using React.js and Redux for global state management.
- Integrated Google Maps JavaScript API for real-time location display, route directions, and distance-based service filtering, improving user discovery experience.
- Optimized rendering performance with React.memo, useMemo, and useCallback, reducing component re-renders by ~35% on listing pages with 100+ service items.

EDUCATION

B.Tech in Electrical and Electronics Engineering

Rajiv Gandhi Proudhyogiki Vishwavidyalaya (RGPV), Bhopal

CERTIFICATIONS & CONTINUOUS LEARNING

- Actively pursuing: TypeScript deep-dive, Next.js (App Router, Server Components), and AWS Cloud Practitioner fundamentals.
- Completed: JavaScript (ES6+) advanced patterns, React performance optimization, frontend system design patterns.
- Platforms: LeetCode (DSA practice — 100+ problems solved), NeetCode 150, freeCodeCamp, Namaste React.
